

ID	Usecase name	Goal	Initiator	Pre-conditions	Post-conditions	Main Success Scenario	Alt / Failure Scenarios
UC-01	Browse & Search Books	Allow a Reader to search the multi-vendor catalogue by title, author, genre, or ISBN and receive a ranked list of matching results.	Reader	•Reader is logged into the platform. •At least one bookstore has been onboarded and has active inventory.	•A list of matching books is displayed, each showing title, author, price, condition, and nearest store. •Search terms are recorded in the Reader's activity log for recommendation purposes.	1.Reader navigates to the Search page and enters a keyword (title, author, genre, or ISBN). 2.System queries all active bookstore inventories in the database. 3.System applies basic filtering. 4.System applies Intelligent Stock Routing (books available at a store nearest to the Reader's registered postcode are ranked higher). 5.System applies Dynamic Pricing Sync (prices shown reflect any active store discounts or membership-tier benefits). 6.System renders the results list. 7.Reader selects a book to view its detail page .	[A1 — No results found] System displays 'No books matched your search.' . [A2 — Reader not logged in] System allows browsing but disables 'Hold', 'Pre-Order', and 'Add to Cart' actions until the Reader logs in.
UC-02	View Book Details	Provide a full overview of a book's status, condition, and purchase options in one clear view.	Reader	•The book record exists in the central catalogue.	•Reader has viewed full book details.	1.Reader clicks on a book from search result list. 2.System retrieves the book record including title, author, ISBN, genre, and edition details.	[A1 — Book out of stock] Hold and Add-to-Cart buttons are disabled. [A2 — Book record not found].
UC-03	Place Order	Enable a Reader to finalise a purchase, splitting a mixed-vendor cart into sub-orders, calculating tax, applying event discounts, and processing payment.	Reader	•Reader is logged in. •Cart contains at least one book from at least one active bookstore. •Payment method has been provided.	•One or more sub-orders are created in the database, one per vendor. •Reader receives an order confirmation notification.	1.Reader opens the Cart and clicks 'Proceed to Checkout'. 2.System invokes Multi-Vendor Cart Splitter — it groups cart items by vendor and creates a separate sub-order for each bookstore. 3.System checks for Event Book Bundle — if any item is linked to an event ticket already in the cart, a discount is automatically applied. 4.System calls Tax — it retrieves the vendor's registered region and applies the corresponding regional tax rate to each sub-order. 5.System displays an order summary per vendor: items, subtotal, tax, and discount. 6.Reader selects a pickup method (Click-and-Collect or delivery) and confirms the order.	[A1 — Payment declined] System notifies the Reader and returns them to the payment screen. Order is not created. [A2 — Item sold out between cart and checkout] System removes the item, recalculates totals, and informs the Reader before continuing.
UC-04	Manage Inventory	Allow a Bookstore Owner to maintain their book catalogue on the platform, including adding, updating, and removing listings.	Bookstore Owner	•Bookstore Owner is logged in. •The bookstore has been verified and onboarded	•The platform catalogue reflects the most current inventory for that bookstore. •Cross-Store Inventory Sync	1.Bookstore Owner accesses the Inventory Management dashboard. 2.Owner selects an action: Add Book, Update Book, Remove Book. 3.System confirms the change and displays the updated inventory list.	[A1 — ISBN not recognised] System prompts the Owner to enter book details manually.
UC-06	Update Click-and Collect Status	Allow a Bookstore Owner to transition a Click-and-Collect order through its lifecycle states.	Bookstore Owner	•Book is available. •The Bookstore Owner is logged in.	•Order state is updated (Placed → Ready → Collected). •Reader is notified at each transition.	1.Bookstore Owner opens the Orders dashboard and locates a 'Placed' Click-and-Collect order. 2.Owner clicks 'Mark as Read'. System transitions order state to 'Ready' . 3.System calls Notification System — Reader receives a notification: 'Your order is ready to collect.' 4.When the Reader collects the book, Owner scans or confirms the transaction and clicks 'Mark as Collected'. 5.System transitions order state to 'Collected' .	-

UC-07	Grade Used Book Condition	To help the Bookstore Owner easily set a fair price for a used book by selecting its condition from a simple list.	Bookstore Owner	•A used book is being added or updated in inventory. •The Owner is logged in.	•Book is assigned a condition label (Fine, Good, Fair). •Price modifier is applied and stored in the listing.	1. Owner selects 'Used' as the book condition. 2. System presents the Used-Book Grading Protocol form with three grades and their criteria: Fine — Like new; Good —, readable; Fair. 3. Owner selects the appropriate grade. 4. System displays the calculated final price for the Owner to review and confirm. 5. Owner confirms. Listing is saved with condition label and adjusted price.	[A1 — Manual Price Change] If the Owner doesn't like the suggested price, they can type in their own.
UC-08	Set Dynamic Price	Allow a Bookstore Owner to configure discount percentages that the system uses to automatically recalculate displayed book prices based on membership tier.	Bookstore Owner	•Bookstore is onboarded and verified. •Owner is logged in.	•Discount rules are saved. All affected book prices in the store are recalculated and updated in real time.	1. Owner navigates to the Pricing Settings page. 2. Owner sets a discount percentage for each membership tier. 3. Owner clicks 'Apply Pricing Rules'. 4. System triggers Dynamic Pricing Sync — it recalculates every listed book's displayed price based on the new discount tiers. 5. System confirms: 'Pricing rules updated successfully. X book prices have been recalculated.' 6. Readers browsing the store will now see tier-adjusted prices automatically.	-
UC-09	Place Hold-on-Shelf Request	Allow a Reader to reserve a specific copy of a book for 24 hours without payment, preventing it from being sold to others during that window.	Reader	•Reader is logged in. •The book is in stock . verified bookstore. •No active hold already exists for this book-Reader combination.	•A hold record is created, timestamped, and linked to the Reader and the bookstore. •The book is flagged as 'On Hold' and removed from available stock display for 24 hours	1. Reader views a book's detail page and clicks '24-Hour Hold'. 2. System checks Hold-on-Shelf availability — verifies stock is available and no active hold exists. 3. System creates a Hold record with: Reader ID, Book ISBN, Store ID, Hold Start Time, Hold Expiry (Start + 24 hours). 4. System marks the book as 'On Hold' — the Add-to-Cart button for this copy is disabled for other readers. 5. Reader receives a confirmation notification. 6. If Reader visits the store or places an online order within 24 hours, the hold is converted to a purchase. 7. If 24 hours elapse without purchase, the hold is automatically released and the book returns to available stock.	[A1 — Book goes out of stock before hold is placed] System rejects the request and shows an 'Out of Stock' message. [A2 — Reader already has an active hold for this book] System shows 'You already have an active hold for this title' and does not create a duplicate.
UC-11	Manage Book Club	Allow a Club Organizer to create, configure, and delete a Book Club, including setting its privacy level .	Club Organizer	•User is logged in with Club Organizer role. •Platform rules allow a maximum of 3 active clubs per Organizer.	•A Book Club record is created / updated / deleted in the system. •Privacy settings are applied	1. Club Organizer navigates to 'My Clubs' and selects an action: Create, Edit Settings, or Delete. 2. Upon completion, system applies Private vs. Public Club Privacy Logic — determines access permissions based on the club type. 3. System confirms the action and updates the club's listing on the discovery page.	[A1 — Organizer limit reached] System prevents creation if the Organizer already manages 3 active clubs.
UC-12	Manage Club Membership	Allow Readers to join public or private book clubs, and allow Club Organizers to approve, reject, or remove members.	Club Organizer, Reader	•Book Club exists and is active. •Reader is logged in.	•Reader is added to or removed from the club member list. •Club privacy settings are enforced.	1. Reader discovers a club on the discovery page and clicks 'Join'. 2. System checks Privacy Logic : if Public, Reader is added immediately; if Private, a join request is created. 3. For Private clubs: Organizer receives a notification and reviews the request. 4. Organizer clicks 'Approve' or 'Reject'. 5. If approved, Reader is added as a member and receives a welcome notification. 6. If an Organizer removes a member, system revokes access and notifies the member.	[A1 — Club at capacity] System shows 'This club is full' and offers to add the Reader to a waitlist. [A2 — Reader tries to join a club they were previously removed from] System requires Organizer approval regardless of club privacy type.

UC-13	Set Reading Schedule & Goals	Allow a Club Organizer to define chapter reading ranges with deadlines and have the system automatically track member progress against those goals.	Club Organizer	•A Book Club is active with at least one member. •A current book has been selected for the club.	•Reading schedule is saved and visible to all club members. •Automated progress tracking is activated for the current book	1.Club Organizer navigates to the Reading Schedule page for the club. 2.Organizer defines goals: e.g., 'Chapters 1-5 by Monday'. 3.Organizer sets a deadline date and time for each goal. 4.System saves the schedule using Collaborative Reading Schedule logic . 5.Members' progress percentages are updated as they log their current chapter.	[A1 — No book selected for the club] System prompts the Organizer to first select or vote on the next book .
UC-14	Manage Events	Allow a Bookstore Owner or Verified Author to create, update, and cancel events (book signings, author talks) with separate in-person and virtual capacity limits.	Bookstore Owner, Verified Author	•User is logged in with Bookstore Owner or Verified Author role. •Bookstore is active	•Event record is created / updated / cancelled. •Event appears on the platform events page. •Ticket sales open	1.Owner / Author navigates to the Events Management dashboard. 2.User selects an action: Create Event, Update Event, or Cancel Event. 3.Upon completion, the system updates the events listing and notifies subscribed Readers.	[A1 — Scheduling conflict with another event] System warns the Owner and asks to confirm or choose a different date.
UC-15	Attend Event	To enable a user to participate in a scheduled event, whether by purchasing a ticket, joining a waitlist if full, or entering a virtual space when live.	Reader	• The user must be logged into the platform . • The event must be visible in the "Events & Author Interactions" section.	• The user successfully obtains a ticket, enters a waitlist, or gains access to the live event stream.	1.View Event: The Reader selects a specific event they wish to attend. 2.Check Availability: The system verifies if tickets are currently available. 3.Purchase Ticket: The system triggers Purchase Event Ticket as an included function 4.Confirm Attendance: The Reader completes the payment and receives a confirmation/ticket. 5.Access Lobby: Once the event status is set to "live," the Reader enters the virtual space.	[A1 — Event is Sold Out] The system detects that no tickets are available. [A2 — Unsuccessful: Payment Failure]
UC-16	Apply Bundle Discount	Automatically detect when a Reader's cart contains both an event ticket and the event's linked book, and apply a bundle discount to the book's price.	Reader	•Reader's cart contains an event ticket. •The cart also contains the book associated with that event. •The event has a bundle discount configured	•Bundle discount is applied to the linked book's price. •Discounted total is shown in the checkout summary	1.During checkout , system scans the Reader's cart for event tickets. 2.For each event ticket found, system retrieves the event's linked book ISBN using Event-Related Book Bundling logic. 3.System checks if the linked ISBN is also present in the cart. 4.System applies the discount and updates the cart item's price. 5.Reader sees the discounted book price with a 'Bundle Deal' tag in the checkout summary.	[A1 — Book not in cart] No discount is applied.
UC-17	Manage User Roles	Allow the System Administrator to assign, update, or revoke roles (Reader, Bookstore Owner, Verified Author, System Administrator) for any user account.	System Administrator	•Admin is logged in. •The target user account exists.	•User's role is updated. •User's access permissions change immediately upon next login.	1.Admin navigates to 'User Management' and searches for a user by name or email. 2.Admin selects the user record and clicks 'Edit Role'. 3.Admin selects the new role from the Role-Based Access Control (RBAC) panel : Reader, Bookstore Owner, Verified Author, or System Administrator. 4.Admin confirms the change. System updates the user_roles table. 5.System logs the role change in the System Audit Trail . 6.User's new permissions take effect at their next login session.	[A1 — Admin attempts to remove the last Administrator account
UC-18	Manage Order Dispute	To allow a Reader to report an issue with an order and ensure a System Administrator can mediate and resolve the conflict.	Reader, System Administrator	• The Reader must have a completed or in-progress order . • The System Administrator must have access to the dispute management dashboard.	he dispute is officially recorded, reviewed, and closed with a final resolution note	1. The Reader selects a problematic order and submits a complaint . 2. The system activates Multi-Store Dispute Mediator to flag the order for review. 3. The System Administrator receives a notification and reviews the details provided by the Reader. 4. The Admin adds resolution notes. 5.The system notifies the Reader of the outcome and closes the ticket.	[A2 — Unsuccessful: Invalid Dispute] The Reader tries to file a dispute for an order that is too old

UC-19	Track Reading Progress	Allow a Reader to update their current chapter position so that the system can calculate and display a personal progress percentage.	Reader	•Reader is a member of a Book Club with an active reading schedule. •A book and schedule have been set by the Organizer.	•Reader's progress is updated in the database. •Progress percentage is recalculated and displayed. •If the reading goal milestone is reached, discussion threads are unlocked.	1.Reader navigates to 'My Clubs' and selects the active club. 2.Reader clicks 'Update Progress' and enters the chapter they have just completed. 3.System retrieves the total number of chapters for the current book. 4.System saves the progress record and refreshes the visual progress bar. 5.System checks if the Reader has reached the current Reading Goal milestone set in the schedule — if so, discussion threads for that section are unlocked.	[A1 — Reader enters a chapter number beyond the total]. [A2 — No schedule set] Reader can still update progress, but no milestone unlocking occurs.
UC-20	Unlock Discussion Thread	To automatically grant a Reader access to a specific discussion once they finish the required chapters, keeping the story a surprise for everyone else.	Reader	• Reader is a member of a club with an active reading schedule. • The discussion thread for this section is currently locked. • Reader's progress meets or exceeds the milestone chapter.	• The discussion thread is unlocked for this Reader. •Reader can post in threads.	1.System detects that Reader's progress update meets or exceeds the milestone defined in the schedule. 2.System checks Synchronized Discussion Cycles to find the correct chapter-thread pair. 3.System updates the record to Unlocked for this specific Reader. 4. The system immediately opens the discussion feed and activates the "Post" field for the Reader.	[A1 — Reader's progress is below milestone]: Thread remains locked. System shows "Complete chapters X to unlock this discussion."
UC-21	Manage Author Q&A	Allow club members to submit questions to a Verified Author, and allow the Verified Author to post answers, creating a structured Q&A channel within a book club.	Reader, Verified Author	•A Verified Author has been linked to the club or the current book. •Reader is a club member. •Verified Author is logged in with the Verified Author role.	•Reader's question is saved and visible to the Verified Author. •Author's answer is saved and visible to all club members.	1.Reader navigates to the 'Ask the Author' section of the club. 2.Reader types and submits a question. 3.System saves the question and notifies the Verified Author. 4.Verified Author logs in, views pending questions sorted by votes. 5.Verified Author selects a question and types a response. 6.Author clicks 'Post Answer'. System saves the answer and links it to the question.	[A1— Non-verified user tries to post an answer]
UC-22	Lend/Borrow Physical Book (P2P)	Allow club members to offer and borrow physical copies of the club book from each other, with the system managing due dates.	Reader	•Both the lender and the borrower are members of the same club. •The lender has listed a physical copy as available to lend.	•A lending record is created with borrower ID, lender ID, book ISBN, lend date, and expected return date. •Borrower is notified with the due date.	1.Reader (Lender) navigates to 'Club Lending' and clicks 'Offer to Lend' for their copy. 2.System lists the offer on the club's lending board. 3.Another Reader (Borrower) views the lending board and clicks 'Borrow'. 4.Both lender and borrower receive notifications with the return due date. 5.When the Borrower returns the book, the Lender confirms receipt and the lending record is closed. 6.System monitors due dates daily — if overdue, it sends a reminder notification to the Borrower.	[A1 — Borrower does not return by due date] [A2 — Lender withdraws the offer] If no Borrower has confirmed, the offer is removed. If a Borrower exists, Lender must contact them directly to resolve.
UC-23	Export / Delete User Data	Allow a Reader to exercise GDPR rights by requesting a full export of their personal data or requesting permanent account deletion.	Reader, System Administrator	•Reader is logged in. •Reader navigates to 'Data & Privacy Settings'.	•For export: A JSON file containing all personal data is emailed to the Reader within 24 hours. - For deletion: All personal data is anonymised or deleted; account is deactivated	1.Reader navigates to 'Data & Privacy Settings' and selects either 'Export My Data' or 'Delete My Account'. 2.For Export: System uses GDPR Compliance Logic — compiles all Reader data (profile, reading history, orders, annotations, reviews) into a structured JSON file and emails it. 3.For Deletion: System anonymises personally identifiable fields (name → 'Deleted User', email → null, reading history → deleted). Orders are retained for financial audit purposes with Reader ID replaced by a pseudonym. 4.System notifies the Reader: 'Your data export / account deletion has been completed.'	[A1 — Reader has active orders or pending disputes] For deletion: System delays full anonymisation until all active transactions are resolved.
